

1. *My main points of strength:*

*I always consider myself a very good team player, in my opinion dealing with the whole team in professional way is 50% of the reason of the team's success. Also intending to gain knowledge and continuous learning and technical improvement is important to be taken in consideration. Last but not least I am a committed person and always determined to finish all my tasks on time with good quality.*

2. *The areas I feel it needs development:*

*In my belief a mature human should learn till the last day of his life, whatever the level of knowledge he has reached although there will always be a missing part, so he has to search for it to complete his view. Because of this belief I am always seeking to improve myself in different fields, as coding when we relate it to technical field and automation, also team leading and management may need some working on.*

3. *My career aspirations within the next 3 to 7 years:*

*As I have mentioned in the previous point that I am working on my coding skills, the most thing I am intended to do is to be an automation guru in the next few years. I am doing my best to gain experience in this field to be one of its famous experts.*

4. *An incident where I felt I have exceeded my own performance expectations:*

*When I intended to take the "Agile Tester" exam there was a huge work pressure, and my company doesn't work using agile technique, so I had to study agile from scratch and to work under pressure at the same time. I thought it was a bad time for such exam, but I have studied and passed it despite of the work pressure I had.*
